

KITCHENINTERIORDESIGN

SieMatic

HOME AND KITCHEN

Do you know the difference between a kitchen and a SieMatic? In a kitchen food is simply cooked – in a SieMatic cooking becomes an enjoyment. Kitchen Interior Design by SieMatic offers new and creative possibilities for the design of your home by integrating the kitchen into living areas and your home's architecture. A myriad of options lead to designs that go far beyond normal kitchen planning – they lead to a SieMatic that is uniquely your own, a perfect match for your life and home. A perfect match for you.

What style of kitchen fits your space?
For new ideas, please visit
www.siematic.com/spaces

INDIVIDUALITY

Discover spaces for each of your ideas. Design with color, shapes, volume and materials to create an atmosphere uniquely your own. Pair attractive accents with countertops – make walls and niches focal points. Choose from a wide range of programs to suit your own taste and design philosophy. “Clean” SieMatic styles consist of modern, minimal forms. “Enriched” SieMatic styles focus on details of classical design. Both can be tailored to your kitchen with the help of your design consultant. Each SieMatic kitchen is unique, designed according to your wishes, equipped to fit into your life. Only then will it be built. Just for you.

The combination of cooking and living spaces flows seamlessly from floor to ceiling. Behind each door lies useful storage space to accommodate every need.

SIEMATIC FLOATING SPACES

Whether in fine wood, matt or gloss lacquer or high-quality laminate, the SieMatic FloatingSpaces panel system is available in nearly every finish in the SieMatic spectrum. Even the functional elements are customizable – shelves are available in thicknesses of 12 and 28 mm, in various lengths for individual planning. The finish of the shelves can also be specified to create unique tone-on-tone contrast to the panels on the walls.

INTERIOR
DESIGN
**BEST
OF
YEAR 2012**

Whether a rail, towel hook or shelf – each of the numerous functional elements of the SieMatic FloatingSpaces system can be easily reconfigured on the paneled wall, placed to suit your tastes and needs.

ORGANIZED INTERIORS

In a SieMatic kitchen, never have trouble with pot lids falling out of the closet. No more fumbling for baking sheets with an open oven. No more searching for coffee, rubber bands or shopping lists. Always have wine stored and ready without searching through boxes. SieMatic organization makes your culinary life more comfortable!

In each SieMatic kitchen, the cabinets become valuable functional units. Each utensil has its special place. SieMatic interior design system creates individual planning for each drawer, allowing you to personalize your kitchen based on your own preferences.

SIEMATIC MULTIMATIC

Nowhere in the home is space as valuable as in the kitchen cabinets, but this is where many precious centimeters are usually wasted. Unless it is a SieMatic! Inside each SieMatic is much more: MultiMatic – a highly flexible interior system configured as needed.

The patented SieMatic multifunction tracking rail inside the cabinet offers infinite adjustment of the cabinet interior, easily reconfigured by you. This allows for customizing the interior space for the storing and sorting of items. You will gain space: up to 30% more!

The rows of SieMatic multifunction tracking rail are hygienically sealed into the body of the cabinet, eliminating the possibility of swelling or splintering on the edges and allowing easy cleaning with a damp cloth.

INTERNAL BEAUTY

SIEMATIC INTERIOR SYSTEM

The SieMatic SF10 drawer interior system provides aesthetically and functionally unique solutions. Made of light oak, high-quality aluminum and fine porcelain, SF10 offers elegant options in delicate shades of grey. The wide range of fine oak interiors can be combined into many different options, perfectly tailored to your desire. Decorative and functional elements can be stacked and labeled. SieMatic GripDeck inserts made of light oak with integrated anti-slip strips ensure stability for heavy objects.

German Design Award 2013:
Design Council of the Federal Republic
of Germany awarded the SieMatic
drawer interior system with a
"Special Mention" for outstanding
quality and design.

A kitchen? A living room? Explore the connection between cooking and living. Be inspired by a unique range of exquisite materials and colors.

QUALITY

Preferring the best: quality has always defined our philosophy. This is why, after years of daily use, your kitchen will still remain beautiful. Strict manufacturing controls ensure the highest quality, unmatched precision and environmental responsibility. SieMatic is audited in all areas as required by industry standards. Not only does SieMatic meet these industry audits, but SieMatic regularly surpasses standards for quality and reliability, qualified by neutral councils. The reasons for SieMatic's high standards of quality go beyond manufacturing and modern technology – they are rooted in our rich corporate heritage. Since 1929, SieMatic has built and delivered first-class kitchens – nothing else.

Each SieMatic has special qualities.

SIEMATIC ZEROMATIC

Whichever you choose, SieMatic ZeroMatic fronts in matt or gloss laminate and in SimiLaque matt or gloss are extremely easy to clean, highly durable and have a particularly high quality, flawless look. Innovation replaces traditional manufacturing methods: the ZeroMatic fronts are manufactured using the latest laser technology to perfectly fuse the fronts creating a joint-free, seamless appearance.

SIEMATIC S3

The new Siematic S3 kitchen combines innovative design ideas with unique color accents which one can change and replace at will. The vibrancy of color does not cost more, but less than one would think. Surprising design at a surprising price!

For more examples of the Siematic S3, please visit www.siematic.com/S3

POSSIBILITIES

High-quality aluminum handles in seven different colors can be changed and reconfigured regularly – only with the SieMatic S3! Whether subtle or dynamic, casual or expressive – each combination is free to plan. Simply choose the colors for the doors and handles or handle profiles to put together your own creation.

The nearly invisible integrated grip handles create the distinctive look of the S3. They are the accent line that can be discreet or expressive depending on the color combinations you choose. Handles and grips are located horizontally on the base cabinets and vertically on the wall and tall cabinets, both of which emphasize the unique furniture elements.

PERSONALITY

SIEMATIC S2

In 1960, SieMatic presented the first handle-free kitchen to the world. Since then, handle-free design has been constantly reinvented. The SieMatic S2 represents perfection of design, workmanship and function. In a time when many designs are similar, the S2 offers kitchen design purists something of special value: character and personality. These traits come from the many high-quality and distinctive features that were developed exclusively for the SieMatic S2.

PERFECTION

SIEMATIC DUST SEAL

Many of the options and features we now take for granted were once innovations originally introduced by Siematic. One of these features is the integrated dust seal. It ensures that doors can be closed without a sound. It also protects the interior of the cabinet from dust, dirt and vapors from cooking. Just like every Siematic development, the dust seal has been continuously perfected over the years. Whether your kitchen is designed with or without handles, all Siematic cabinetry features the integrated dust seal.

Explore the details: www.siematic.com/perfection

SIEMATIC S1

The SieMatic S1 is considered to be one of the most innovative, exclusive kitchens of our age. Its characteristic design was created out of the endeavor to integrate technical functions to be nearly invisible and to offer intuitive use. We've developed a handle just for the SieMatic S1 that opens up new dimensions: MaticMotion. Thanks to integrated sensor technology, three drawers can be controlled with one touch. MaticMotion is always located at the perfect ergonomic location at hand height. That prevents any unintended openings as well as any fingerprints on drawers that are opened by pressing on the front. The result: absolutely nothing interrupts the elegant, linear appearance of the SieMatic S1.

The creators of the handle-free kitchen now present a wide selection of handles, handle recesses and buttons featuring exclusive SieMatic design. They allow for a wide range of custom design options – when it comes to creating your kitchen, your personal style is reflected in each detail, down to the choice of handles.

FOR
THE SENSES

SieMatic Multimedia solutions extend beyond the exclusive options for S1 to include all programs. Integrate entertainment options that work best for your environment: from high-end audio/video, developed together with experts T+A, to full internet access. Why should your kitchen be less entertaining than your living room?

SIEMATIC MEDIA MODULES

Listening and viewing at a new level: SieMatic Multimedia solutions offer numerous options for highly-individualized combinations of audio, video and internet. Outstanding data transmission is ensured by use of Bluetooth technology. Designed in collaboration with T+A.

Audio system: Radio with FM tuner; connection with Bluetooth-capable devices (tablets, PCs, etc.); output of audio files in the highest possible sound quality including subwoofer and options for connecting analog devices, from loudspeakers to MP3 players to complete home entertainment systems. The system can be installed optionally in base, wall or tall cabinets.

Media system: In addition to all of the options of the audio system, options are available for web radio, TV service, iPod/iPhone connection and USB interface to display on a 19" monitor.

SIEMATIC BEAUXARTS.02

There are kitchens for purists, for romantics, and for pragmatists. For everyone with ideas that aren't one size fits all, there is SieMatic Interior Design. SieMatic is constantly creating and recreating one-of-a-kind solutions whose options extend far beyond classic kitchen planning.

For example, the SieMatic BeauxArts.02: a room design concept that allows you to play around with different styles and combine seemingly opposite design elements to create one harmonious whole. Based on the like-named architectural style that produced many world-class structures, SieMatic BeauxArts.02 breaks from the rules of customary kitchen planning, creating its own principles of aesthetic interior design resulting in the development of new, individual interpretations of the classic kitchen. The furniture is not arranged as usual – it is instead arranged according to a unique and relaxed design principle. The result: a countless combination of possibilities that create a kitchen that's one of a kind in every conceivable way – your SieMatic BeauxArts.02

“ A great kitchen has a magic to it that transforms the physical room into a feeling. People are drawn to that kitchen, and they may not know why. The kitchen sings. It is my job to write the music. ”

The SieMatic BeauxArts.02 was designed in collaboration with Mick De Giulio, the man known as the “Rock Star of Kitchen Design” in the USA. It expands design freedom by adding new, unconventional ideas. The only rules are the rules dictated by your own personal style – playing around with styles and volumes, colors and materials, symmetry and asymmetry is part of the experience.

Classic or modern? Lacquer or Stainless Steel?
Matt or gloss? Why choose? The SieMatic
BeauxArts.02 uses contrasting elements to
create a harmonious design. Create your
own individual and sensational interpretation
of the classic kitchen.

SIEMATIC CITYCOUNTRY.02

Urban and rural, young and old, nostalgic and modern – design elements come together to form a classic and contemporary kitchen design. These elements join to create a unique environment: warm and cozy but young and lively. "City" stands for the pure and straightforward while "Country" stands for rural and romantic.

Any SieMatic can easily adapt to the CityCountry.02 design philosophy. The careful selection of materials and colors for furniture elements, walls and floors forms the character of the design and makes your SieMatic reflect your personality and lifestyle.

MIX AND MATCH

The kitchen is the place to develop your culinary taste, but it is also the place to express your personal taste. Whether your design is minimalist or classic, choose if you prefer laminate, lacquer or wood – SieMatic Kitchen Interior Design gives you more room for all of your wishes and ideas. Be inspired by the unique possibilities of shapes, colors and materials, and combine them to your desire.

SieMatic ColorSystem

The SieMatic ColorSystem is consistent for all SieMatic collections. Available in a range of 6 attractive colors, each is available in matt or gloss finish. It allows for individual combinations of materials and doors. For lacquers there are also two more shades of grey in matt and gloss. Beyond the standard colors, 1,950 individually selectable colors in either matt or gloss are available in the SieMatic Individual ColorSystem (NCS).

Finishes

SieMatic kitchens in lacquer exude the elegance of residential furniture while remaining beautiful through regular use. The exclusive SieMatic SQ lacquer fronts are manufactured with “Superior Quality” through an innovative painting process which allows maximum flexibility for planning, eco-friendly processing, and “made in Germany” quality. A visually and attractively priced alternative to the exclusive SieMatic SQ is the newly developed SieMatic SimiLaque fronts, available in matt and gloss. Just like the ZeroMatic fronts, the SimiLaque laminate fronts are manufactured with the latest laser technology, creating a joint-free, seamless front.

Woods

Wood is a material that radiates natural warmth. SieMatic offers you a wide range of finishes in fine wood which work equally well for minimalist or classical planning. The particularly expressive varieties are available as continuous veneer, demonstrating a true master’s craft.

Countertops and recess panels in StoneDesign

Countertops and recess panels made of genuine natural stone or composite are timelessly beautiful, incomparably elegant and can considerably enhance the character of a kitchen. Countertops made of solid stone are usually only offered in a few versions. SieMatic StoneDesign expands the scope of design – each plate consists of a carrier substrate with a 1-cm thick sheet made of granite, marble, slate, limestone, volcanic rock, or stone composite. This unique construction allows for thicknesses, lengths and configurations which would otherwise be impossible. SieMatic countertops are not only available in many types of stone, but are also available with many types of edges: embossed or chiseled, worked in an elliptical shape or mitered, or the popular 1-cm optic edge. Also, SieMatic offers a wide range of countertop variations in wood, stainless steel, ceramic and high-quality laminate.

Why do we invest so heavily in the environment? Learn more here:
www.siematic.com/sustainability

Our goal is to work with each of the growing number of effective ecological measures to put sustainable practices into the workplace and ensure the highest quality of product. Each ecological measure is assessed to ensure the quality of the measure – each result is examined and qualified by a neutral auditor. This is because not all environmental certifications are as trustworthy, transparent and meaningful as those awarded to SieMatic and its products. Following our company motto, it is our endeavor to do the best for our environment. Therefore, SieMatic environmental achievements go far beyond industry standards. In addition, SieMatic has a fully integrated quality and environmental management system based on the international DIN standards EN ISO 9001:2008 and ISO 14001. The majority of our materials are made from a highly renewable, recyclable material: wood. We adhere to the requirements set by the FSC (Forestry Stewardship Council) regarding material

sourcing, usage during manufacturing and recycling. Thus, transport routes and energy consumption are as minimal as possible. By using advanced cutting equipment we achieve optimal material utilization with very little waste. The remaining wood waste is 100 % recycled in our own furnace systems for energy. For products from our suppliers, we prefer those within the European area which is governed by the highest statutory rights and obligations. We are highly active in reduction and mitigation of pollutants, so much so we far surpass any environmental law. Environmental responsibility, in conjunction with unmatched manufacturing techniques, brings you a product that is truly individual: your own SieMatic kitchen.
